BioSystems, 25 (1991) 289–291
Elsevier Scientific Publishers Ireland Ltd.

Subject Index
Volume 25

adrenergic synapse, computer simulation, molecular models, neurotransmission, 275
Apicomplexa, phylogeny, ribosomal RNA, dinoflagellates, ciliates, 75
archaebacteria, cytoskeleton, sulfur respiration, 1
Archamoebae, Archezoa, protozoan systematics, Pelobiontea, Mastigamoebida, Phreatamoebida, eukaryote origins, 25
Archezoa, Archamoebae, protozoan systematics, Pelobiontea, Mastigamoebida, Phreatamoebida, eukaryote origins, 25

binary fission, cell regeneration, conjugation, heterokaryotic foraminifera, karyorelict ciliates, nondividing macronucleus, nuclear dimorphism, 67
biological intelligence, molecular automata, enzyme networks, self-modifying systems, prokaryotic cells, 259
biopolymers, homochirality, self-replication, stereospecific activity, symmetry breaking, evolution, 141
brain, choices, disambiguation, lexical ambiguity, semantic commitments, 213

carbon fixation, photosynthesis, diurnal cycles, stromatolites, microbial mats, evolution, Cyanobacteria, 13
cellular automata, invertibility, forward- and backward-time, modulator, local and non-local computation, 151
cellular transport processes, exocytosis, membrane vesicle insertion, random walk, 251
cell regeneration, binary fission, conjugation, heterokaryotic foraminifera, karyorelict ciliates, nondividing macronucleus, nuclear dimorphism, 67
centrosomes, microtubules, immunocytochemistry, mitosis, dinoflagellate, *Crypthecodinium cohnii* B., 53
chemotaxis, neuron, neuromediator, diffusion, memory, learning, 219
chloroplasts, cladistics, chromophytes, oomycetes, morphology, molecules, 101
choices, brain, disambiguation, lexical ambiguity, semantic commitments, 213
chromophytes, cladistics, oomycetes, morphology, molecules, chloroplasts, 101
ciliates, phylogeny, ribosomal RNA, Apicomplexa, dinoflagellates, 75
cladistics, chromophytes, oomycetes, morphology, molecules, chloroplasts, 101
cladistics, colonial green flagellates, 18s rRNA, 26s rRNA, unicellular green flagellates, 85
colonial green flagellates, cladistics, 18s rRNA, 26s rRNA, unicellular green flagellates, 85
computer simulation, molecular models, neurotransmission, adrenergic synapse, 275
conjugation, binary fission, cell regeneration, heterokaryotic foraminifera, karyorelict ciliates, nondividing macronucleus, nuclear dimorphism, 67
conservative behavior, dual action mechanism, enzyme-receptor system, narcotic substance, 193
constraints of evolution, theory of Eigen, neutral theory, fitness landscape, 231
Crypthecodinium cohnii B., centrosomes, microtubules, immunocytochemistry, mitosis, dinoflagellate, 53
Cyanobacteria, photosynthesis, diurnal cycles, carbon fixation, stromatolites, microbial mats, evolution, 13
cytoskeleton, archaebacteria, sulfur respiration, 1

diffusion, neuron, neuromediator, memory, learning, chemotaxis, 219
dinoflagellate, centrosomes, microtubules, immunocytochemistry, mitosis, *Crypthecodinium cohnii* B., 53
dinoflagellates, phylogeny, ribosomal RNA, Apicomplexa, ciliates, 75
disambiguation, brain, choices, lexical ambiguity, semantic commitments, 213
diurnal cycles, photosynthesis, carbon fixation, stromatolites, microbial mats, evolution, Cyanobacteria, 13
dual action mechanism, conservative behavior, enzyme-receptor system, narcotic substance, 193

endosymbionts, symbiosis, heat-shock proteins, stress proteins, monoclonal antibodies, 205
enzyme-receptor system, dual action mechanism, conservative behavior, narcotic substance, 193
enzyme networks, molecular automata, self-modifying systems, prokaryotic cells, biological intelligence, 259
eukaryote origins, Archamoebae, Archezoa, protozoan systematics, Pelobiontea, Mastigamoebida, Phreatamoebida, 25
evolution, biopolymers, homochirality, self-replication, stereospecific activity, symmetry breaking, 141
evolution, photosynthesis, diurnal cycles, carbon fixation, stromatolites, microbial mats, Cyanobacteria, 13
exocytosis, membrane vesicle insertion, cellular transport processes, random walk, 251

fitness landscape, theory of Eigen, neutral theory, constraints of evolution, 231
forward- and backward-time, invertibility, modulator, local and non-local computation, cellular automata, 151
fossil fungi, fungal phylogeny, 121
fungal phylogeny, fossil fungi, 121

heat-shock proteins, symbiosis, endosymbionts, stress proteins, monoclonal antibodies, 205
heterokaryotic foraminifera, binary fission, cell regeneration, conjugation, karyorelict ciliates, non-dividing macronucleus, nuclear dimorphism, 67
homochirality, biopolymers, self-replication, stereospecific activity, symmetry breaking, evolution, 141

immunocytochemistry, centrosomes, microtubules, mitosis, dinoflagellate, *Crypthecodinium cohnii* B., 53
invertibility, forward- and backward-time, modulator, local and non-local computation, cellular automata, 151

karyorelict ciliates, binary fission, cell regeneration, conjugation, heterokaryotic foraminifera, non-dividing macronucleus, nuclear dimorphism, 67

learning, neuron, neuromediator, diffusion, memory, chemotaxis, 219
lexical ambiguity, brain, choices, disambiguation, semantic commitments, 213
local and non-local computation, invertibility, forward- and backward-time, modulator, cellular automata, 151

Mastigamoebida, Archamoebae, Archezoa, protozoan systematics, Pelobiontea, Phreatamoebida, eukaryote origins, 25
membrane potential, neuronal model, synapse, trigger zone, spiking activity, stochastic process, 179
membrane vesicle insertion, exocytosis, cellular transport processes, random walk, 251
memory, neuron, neuromediator, diffusion, learning, chemotaxis, 219
microbial mats, photosynthesis, diurnal cycles, carbon fixation, stromatolites, evolution, Cyanobacteria, 13
microtubules, centrosomes, immunocytochemistry, mitosis, dinoflagellate, *Crypthecodinium cohnii* B., 53
mitosis, centrosomes, microtubules, immunocytochemistry, dinoflagellate, *Crypthecodinium cohnii* B., 53
modulator, invertibility, forward- and backward-time, local and non-local computation, cellular automata, 151
molecular automata, enzyme networks, self-modifying systems, prokaryotic cells, biological intelligence, 259
molecular models, computer simulation, neurotransmission, adrenergic synapse, 275
molecules, cladistics, chromophytes, oomycetes, morphology, chloroplasts, 101
monoclonal antibodies, symbiosis, endosymbionts, heat-shock proteins, stress proteins, 205
morphology, cladistics, chromophytes, oomycetes, molecules, chloroplasts, 101
morphology, mycetozoans, phylogenetic analysis, PAUP, ultrastructure, 113
mycetozoans, phylogenetic analysis, PAUP, ultrastructure, morphology, 113

narcotic substance, dual action mechanism, conservative behavior, enzyme-receptor system, 193
natural selection, self-reproduction, Petri net, niche structure, 237
neuromediator, neuron, diffusion, memory, learning, chemotaxis, 219
neuron, neuromediator, diffusion, memory, learning, chemotaxis, 219
neuronal model, synapse, membrane potential, trigger zone, spiking activity, stochastic process, 179
neurotransmission, computer simulation, molecular models, adrenergic synapse, 275
neutral theory, theory of Eigen, fitness landscape, constraints of evolution, 231
niche structure, self-reproduction, Petri net, natural selection, 237
non-dividing macronucleus, binary fission, cell regeneration, conjugation, heterokaryotic foraminifera, karyorelict ciliates, nuclear dimorphism, 67
nuclear dimorphism, binary fission, cell regeneration, conjugation, heterokaryotic foraminifera, karyorelict ciliates, non-dividing macronucleus, 67

oomycetes, cladistics, chromophytes, morphology, molecules, chloroplasts, 101

Paleozoic Foraminifera, Protista, phylogeny, wall structure, systematics, 39
PAUP, mycetozoans, phylogenetic analysis, ultrastructure, morphology, 113
Pelobiontea, Archamoebae, Archezoa, protozoan systematics, Mastigamoebida, Phreatamoebida, eukaryote origins, 25
Petri net, self-reproduction, niche structure, natural selection, 237
photosynthesis, diurnal cycles, carbon fixation, stromatolites, microbial mats, evolution, Cyanobacteria, 13
Phreatamoebida, Archamoebae, Archezoa, protozoan systematics, Pelobiontea, Mastigamoebida, eukaryote origins, 25
phylogenetic analysis, mycetozoans, PAUP, ultrastructure, morphology, 113
phylogeny, Protista, Paleozoic Foraminifera, wall structure, systematics, 39
phylogeny, ribosomal RNA, Apicomplexa, dinoflagellates, ciliates, 75
primitive photosynthesis, surfactant micelles, protoporphyrin IX, 131
prokaryotic cells, molecular automata, enzyme networks, self-modifying systems, biological intelligence, 259
Protista, Paleozoic Foraminifera, phylogeny, wall structure, systematics, 39

protoporphyrin IX, surfactant micelles, primitive photosynthesis, 131
protozoan systematics, Archamoebae, Archezoa, Pelobiontea, Mastigamoebida, Phreatamoebida, eukaryote origins, 25

18s rRNA, colonial green flagellates, cladistics, 26s rRNA, unicellular green flagellates, 85
26s rRNA, colonial green flagellates, cladistics, 18s rRNA, unicellular green flagellates, 85
random walk, exocytosis, membrane vesicle insertion, cellular transport processes, 251
ribosomal RNA, phylogeny, Apicomplexa, dinoflagellates, ciliates, 75

self-modifying systems, molecular automata, enzyme networks, prokaryotic cells, biological intelligence, 259
self-replication, biopolymers, homochirality, stereospecific activity, symmetry breaking, evolution, 141
self-reproduction, Petri net, niche structure, natural selection, 237
semantic commitments, brain, choices, disambiguation, lexical ambiguity, 213
spiking activity, neuronal model, synapse, membrane potential, trigger zone, stochastic process, 179
stereospecific activity, biopolymers, homochirality, self-replication, symmetry breaking, evolution, 141
stochastic process, neuronal model, synapse, membrane potential, trigger zone, spiking activity, 179
stress proteins, symbiosis, endosymbionts, heat-shock proteins, monoclonal antibodies, 205
stromatolites, photosynthesis, diurnal cycles, carbon fixation, microbial mats, evolution, Cyanobacteria, 13
sulfur respiration, archaebacteria, cytoskeleton, 1
surfactant micelles, protoporphyrin IX, primitive photosynthesis, 131
symbiosis, endosymbionts, heat-shock proteins, stress proteins, monoclonal antibodies, 205
symmetry breaking, biopolymers, homochirality, self-replication, stereospecific activity, evolution, 141
synapse, neuronal model, membrane potential, trigger zone, spiking activity, stochastic process, 179
systematics, Protista, Paleozoic Foraminifera, phylogeny, wall structure, 39

theory of Eigen, neutral theory, fitness landscape, constraints of evolution, 231
trigger zone, neuronal model, synapse, membrane potential, spiking activity, stochastic process, 179

ultrastructure, mycetozoans, phylogenetic analysis, PAUP, morphology, 113
unicellular green flagellates, colonial green flagellates, cladistics, 18s rRNA, 26s rRNA, 85

wall structure, Protista, Paleozoic Foraminifera, phylogeny, systematics, 39
